Friends and families enjoy the Sunday afternoon skates at the West Colchester Arena. Family skating takes place from 1:pm to 2:24pm. There are rental times available for Birthday parties, hockey and skating. (Submitted)

Study to Determine Alternative to Landfilling

The Municipality of the County of Colchester (Colchester) is participating with Nova Waste Solutions Inc. (NSWI) to complete a feasibility study into an innovative and clean alternative to active landfilling. This climate change and emission reducing alternative to landfilling will also increase recycling diversion, avoid legacy landfill environmental issues and is anticipated to significantly reduce municipal service costs.

Colchester Mayor Christine Blair said "We are pleased to participate in this study as we explore options for progressive use of solid waste prior to any investment decisions by Council."

The study will assess the viability of a plasma gasification processing facility that turns waste resources destined for landfill into clean syngas, which in turn becomes power and heat. The process involves shredding and drying non-recyclable material that then passes through two vessels where plasma arcs create heat that breaks the materials down to a syngas. The materials do not burn due to a lack of oxygen and it does not exhaust to the atmosphere. The Syngas (much like natural gas) is cleaned and used in generators to produce electricity, about half of which powers the facility with the remainder sent to the grid.

"Colchester County and

Nova Scotia are widely recognized as progressive leaders in solid waste management," said Mr. Stephen Mader, President and CEO of Nova Waste Solutions Inc. "and this feasibility project will show how this patented, proven, and highly efficient technology can build on this success by modernizing waste resource management in Colchester and by reducing their dependency on active landfilling."

Nova Waste Solutions Inc. is partnered with CHO Power whose Morcenx France facility is a commercial sized, 50,000 tonnes/year fully operational facility processing commercial waste and biomass. The facility has been operating for over two years and is currently exceeding design targets of over 35% energy efficiency rating. Nova waste Solutions Inc. is licensed to develop a multi-phased plasma gasification technology in Canada that is patented by the company CHO Power.

The Morcenx facility is the first of 12 planned plants in Europe using CHO Power's patented multi-phased plasma gasification technology. The next three are currently under development.

Special Council Meeting

A Special Session of Municipal Council of the Municipality of Colchester will be held in the Council Chambers of the County Courthouse, 1 Church Street, Truro, NS, on Monday, November 6, 2017, at 5:45 pm.

The purpose of this Special Session of Council is to receive the Clerk's declaration of the Special Election for District 9 Councillor and for the swearing in of the Councillor-Elect. This meeting is open to the public.

Do you want to Quit Smoking?

By Chris Urquhart

Do you want to Quit smoking? Put it on paper. Consider what you don't like about smoking and why you want to quit. Do you want to feel better? Are you worried about health consequences, such as lung cancer and heart disease?

Are you looking to set a good example for your kids? Do you want to rid yourself of that lingering smoke smell on your hair, skin and clothes? Write it all down and carry the list with you.

Each time you go to pick up a cigarette or other tobacco product, read your list

and remind yourself why you want to quit. Another item to put on the list is the cost of cigarettes or cigars. Add up what it costs you for a week of smoking then times that by 4. Next, do it by 12 for the 12 months of the year.

So...can you now afford that vacation you've always wanted? New clothes? A better car? Not only will you feel better each time you take a deep breath, your piggy bank will weigh more each week as well! Good luck to you, and don't despair, if you fail a little bit, keep trying. You will get there in the end.
