Amendments to Motor Vehicle Act

Amendments to the Motor Vehicle Act concerning impaired driving, bicycle traffic lights and muffler noise will help improve road safety for all users. Changes introduced on October 22, will allow municipalities and the Province to install traffic control signals for bicycles and authorize municipalities to create bylaws for muffler noise. The changes will also confirm that police officers have the authority to issue a 90-day suspension to anyone who fails or refuses to comply with a demand to take a test related to impairment.

"We want to ensure that our roads are safe for all users," said Public Works Minister Kim Masland. "Today's changes enabling the installation of bicycle traffic signals will improve bicycle infrastructure and help municipalities enhance their cycling networks. As well, municipalities will now have the authority to address the common concern of muffler noise."

Support for Clean Energy Projects

Nova Scotia communities that want to pursue clean energy projects can now apply for funding through the Low Carbon Communities program.

"We have a strong commitment to sustainable prosperity, and our communities play a key part in developing climate-friendly solutions like clean energy projects," said Tory Rushton, Minister of Natural Resources and Renewables. "We encourage communities to bring forward their innovative, sustainable and green projects to help us reduce emissions and advance our building efficiency, clean electricity and clean trans-

portation sectors."

The Low Carbon Communities program is open to community groups, municipalities, First Nations, post-secondary institutions, businesses and non-profit organizations with projects that benefit communities within Nova Scotia.

Funding can be used for community planning and designs, feasibility studies, education, public engagement and initiatives that demonstrate positive and innovative low carbon solutions.
